New kallikrein-like (KLK-L) proteins for diagnosing and treating KLK-L protein mediated disorders, especially cancer.

Claim 12; Page 172; 184pp; English.

The present sequence is one of four alternatively spliced kallikrein-like proteins encoded by the human KLK-L4 gene. Kallikreins and kallikrein-like proteins are a subgroup of the serine protease enzyme family. They catalyse the selective cleavage of specific polypeptide precursors to release peptides with potent bloological activity. Nucleic acids encoding Kallikrein-like proteins KLK-L1, KLK-L2, KLK-L3, KLK-L4, KLK-L5 and KLK-M nuclein solated. The proteins are useful in the treatment. They monitoring and diagnosis of cancers, especially prostrate cancer. They can also be used to identify a substance that can associate with or mediate the biological activity of the proteins. Antibodies can be used

The present invention describes mucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenic disorder in mammals by modulating cell proliferation, angiogenesis and cardiovascularisation, and for identifying agonists and antagonists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and disquosis of diseases associated with inappropriate PRO expression such as cardiovascular, endothelial or angiogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NCs) and vectors containing them and the PRO polypeptide may be used to treat disorders associated with decreased PRO expression. AAA77510 to AAA7721 and AAB24188 to AAB24415 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     181 ISNMVCAGGVPGQDACQGDSGGPLVCGGVLQGLVSWGSVGPCGQDGIPGVTYICKYVDW 240

                                                                                                                         09-MAR-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                       6-SEP-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          7-SEP-
3
                                                                                                                                                                                                                                                                        The present invention describes an antibody that binds to a human protein (I) selected from: PRO381; PRO1269; PRO1410; PRO1755; PRO1780; PRO3434; PRO4367; PRO1925; PRO1293; PRO1303; PRO4344; PRO4344; PRO4344; PRO4344; PRO43440; PRO1555; PRO1096; PRO2038; and PRO2266. (I) has anticancer activity and can be used to diagnose tumours in mammals, by detecting complex formation when the antibody is contacted with test cells.

Increased expression of genes encoding (I) can also be detected to diagnose tumours. Agents which inhibit the activity of (I), especially the antibodies, or an antisense oligonuclectide which hybridises to genes encoding (I). can be used to inhibit the present invention can be used to inducing (I). can be used to inhibit the biological activity of (I). AAC58019 conducing cell death. Methods from the present invention can be used to inducing cell death. Methods from the present invention for human PRO sequences. AAC58103 to AAC58122 and AAB24021 to AAB24040 represent human PRO polynucleotide and protein sequences given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240

                                                          AAA37022 to AAA37144 encode the new isolated human transmembrane, receptor or secreted PRO polypeptides given in AAY99340 to AAY99462. The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences encoding then have various industrial applications, including uses as pharmaceutical and diagnostic agents. AAA37145 to AAA37330 represent PCR primers and hybridisation probes used in the isolation of the PRO polypeptides from the present invention

                                                                                                                                                                                                                                                                                                                                                                                                             These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. They may also be used used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nuclasmay also be used in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 MGLSIFLLLCVLGLSQAATPKIFNGTECGRNSQPWQVGLFEGTSLRCGGVLIDHRWVLTA

The sequences are useful in the preparation of a medicament for treating a condition responsive to a PRO polypeptide. The polypeptides are useful in a number of functional biological assays, as molecular weight markers for protein electrophoresis and as therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated PRO polypeptides e.g. PRO1491 and PRO1571, useful in the preparation of a medicament for treating a condition responsive to PRO polypeptide, and as therapeutic agents e.g. vaccines.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           7-SEP-1998
                                                                                                                                                                                                                                                                                        ADD70232;
                                                                                                                                                                                         RESULT 13
                                                                       à
                                                                                                                    qq
                                                                                                                                                                                                                                                                 The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to a maino acid sequence chosen from 123 fully defined sequences as sequence chosen from 123 fully defined sequences as second and acid sequences as encoding PRO, a vector comprising the PRO NA, a constraint call comprising the PRO NA, a constraint protein the vector producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-protein protein probe antibody. Pro is useful as molecular weight markers for protein clectrophoresis and also for chromosome identification. PRO is also useful for tissue typing. PRO and PRO NA are useful as hybridisation probes for a cDNA library to isolate the full-length PRO CDNA, PRO NA is useful for generating transgenic animals or knock-out animals which are useful for generating transgenic animals or knock-out animals which are useful for treating cransgenic animals or knock-out animals which are useful for treating cancerous tumours. PRO1260, PRO1410 polypeptides are useful for superpressing immune response. PRO1410 polypeptide are useful for treating cardiac insufficiency disorders. PRO1266 polypeptide are useful for treating cardiac insufficiency disorders. PRO1266 polypeptide are useful for treating benouse. PRO1275 and PRO1418 polypeptides are useful for treating benoments. PRO1275 and pRO1418 polypeptides are useful for treating benoment in skeletal muscle cells and obsenty. PRO1265, PRO1244 and PRO1382 polypeptides are useful for treating benomenting the present correct proper processents are useful for treating benoment in skeletal muscle cells and obsenty. National proteinase SCCE precursor - human
National Stratum corneum chymotryptic enzyme
C.Species: Homo sapiens (man)
C.Date: 07-Unl-1995 #sequence_revision 07-Jul-1995 #text_change 22-Jun-1999
C.Accession: A53968
